Japanese Writing System

Japanese is written with three types of characters: hiragana, katakana, and kanji. They have different functions, and combinations of the three are used to write sentences.

1. Hiragana

Like the English alphabet, each hiragana letter represents a specific sound and does not have any meaning per se. Unlike in English, there is only one way of pronouncing a single hiragana letter or combination of letters. For example, "e" can be pronounced many different ways in English, as in red, redo, and poorer. The hiragana "あ," though, is always pronounced as "a" in father.

2. Katakana

Katakana letters are another way of writing the hiragana sounds and are usually used for foreign words. While Hiragana uses round strokes, Katakana uses mostly straight lines.

3. Kanji (Chinese characters)

The Japanese imported kanji from China a long time ago and absorbed it into their language by assigning Japanese meanings. Kanji are different from hiragana and katakana because they have specific meanings.

子 = Ko = Child  山 = Yama = Mountain  月 = Tsuki = Moon
川 = Kawa = River  上 = Ue = Top/Up  下 = Shita = Bottom/Down

Japanese Calligraphy (Shodo)

Calligraphy is an art form that has been studied for over three thousand years. Knowledge of calligraphy is an important step in the understanding of Japanese culture. Calligraphy is not merely an exercise in good handwriting, but rather the foremost art form of the Orient. It is the combination of the skill and imagination of the person who has studied intensely the combinations available using only lines. Japanese calligraphy (Shodo) attempts to bring words to life, and endow them with character. The characters must be written only once. There is no altering, touching up, or adding to them afterwards. Children in Japan start learning calligraphy in the 3rd grade. In Shodo class, students are required to be calm and focused.

A calligraphy set consists of:

- **Shitajiki**: Black, soft mat. It provides a comfortable, soft surface.
- **Bunchin**: Metal or plastic stick to weight down the paper during writing.
- **Hanshi**: Special, thin calligraphy paper.
- **Fude**: Brush. There is a larger brush for writing the main characters and a smaller one for writing the artist's name.
- **Suzuri**: Heavy black container for the ink.
- **Sumi**: Solid black material that must be rubbed in water in the suzuri to produce the black ink which is then used for writing. Of course, "instant ink" bottles is also available in bottles.

Unlike the strokes of Roman letters, the strokes of Japanese Hiragana, Katakana and Kanji all have to be drawn in the correct order. When you learn Japanese characters, you draw one stroke after the other. This is called the square (**Kaisho**) style of writing. School children first learn how to write Kaisho style, but this style is mostly used for printing materials, rather than everyday writing. There are two other styles of writing, in which the Kanji become a little bit less legible, just like when writing Roman letters in a fast way. These two styles are called semi cursive (**Gyosho**) and cursive (**Sosho**). Gyosho is the most commonly used for daily writing.
